

Your own daily audio news brief

Every morning you get a private page with a 1 to 3 minute audio brief on the topics you pick, the full transcript with each word lighting up as it's read, direct links to every story, and thumbs up/down buttons that teach it what you like. It runs in your own Claude account.

Before you start (about 15 minutes, on a computer)

- Your paid Claude account (you have this).
- A free GitHub account. Step 1 covers it if you don't have one.
- The intake form: <https://claude.ai/artifact/TQZW7vQwws8rkmU7nkgCHi>

01 Get a free GitHub account

Go to <https://github.com/signup> and sign up. Skip this if you already have one.

Claude Code needs a GitHub account to start a session. You won't have to write or manage any code.

02 Copy the kit to your GitHub

Open <https://github.com/adamteninbaum/daily-digest-kit>, click **Fork** (top right), then **Create fork**.

03 Connect GitHub to Claude

Go to <https://claude.ai/connect-github> while signed in to Claude, and follow the prompts.

When GitHub asks which repositories Claude can use, include **daily-digest-kit**.

04 Fill in the intake form

Open <https://claude.ai/artifact/TQZW7vQwws8rkmU7nkgCHi>. Pick your topics, describe what you're into in your own words, and choose how many stories, what time, your time zone and a voice.

Click **Copy setup message** at the bottom.

05 Paste it into Claude Code

Go to <https://claude.ai/code> and start a **new session**.

Choose the repository **your-username/daily-digest-kit** (the fork from step 2).

Paste the setup message and send it. Claude builds your page and daily schedule, then makes your first brief. Approve anything it asks for. It takes about 5 minutes.

06 Turn on full network access (if Claude asks)

In the session, click the arrow next to the session title, choose **Edit cloud environment**, set **Network access** to **Full**, and click **Save**.

The voice and news feeds need it. Claude checks this during setup and tells you if it's needed.

07 Only if you chose newsletters: connect Gmail

Connect Gmail in claude.ai under **Settings, Connectors**. Then go to <https://claude.ai/code/routines>, open your digest Routine, and add **Gmail** under connectors.

08 Open your page

Claude gives you your page link. Your first brief appears there about 5 minutes after setup.

On iPhone: open the link in Safari, tap **Share**, then **Add to Home Screen**.

Using it

- **Play** the audio; each word lights up as it's read. Tap any word to jump there.
- **More like this / Less like this** on each story teaches it your taste.
- **New brief now** makes an extra one anytime. Allow the permission the first time.
- **All briefs** at the bottom keeps every past day.

If something's off

- No brief after 10 minutes: in the same Claude Code session, ask "My brief didn't appear, can you check the run?"
- Page says audio unavailable: do step 6, then tap **New brief now**.
- Want different topics or a new time: fill in the form again, start a new session with your fork, paste the message and add "Update my Daily Digest profile" at the top.
- Anything else: text Adam.
